## Diploma thesis

Title *Relation Discovery between Indirectly Connected Biomedical Concepts*  
Supervisors Dr. Georgios Tsatsaronis, Prof. Michael Schroeder  
Description In this thesis a novel approach for relation discovery in the biomedical domain is introduced. The approach is based on the combination of information extracted from structured and unstructured data, represented by a graph. The constructed graph allows for the easy integration of heterogeneous information and discovery of indirect connections between biomedical concepts using machine learning to identify characteristic graph path patterns.
